

Genuine Renewal Parts

Positive Interlocks

Replacement Positive Interlocks are available for all vintages of GE Magneblast switchgear. Whether you need to replace damaged units or change out as a part of life extension, we have the solution for your specific switchgear. These are the only new positive interlocks built and tested to the original GE specifications using the original GE drawings and fixtures.

The Positive interlock ensures the circuit breaker is properly inserted into the cubicle before elevation begins, serves as a platform for and starts the elevating motor, actuates the 52/IS switch, houses the clutch that drives the elevating mechanism, eliminates backlash of the jackscrew, and prevents a closed breaker from being raised or lowered.
